Light Transfer — Investigation

Chapter 4 · Energy Transfer · Week 4 (Day 3)

Name: _____ Date: _____

BIG QUESTION

How can light transfer energy from one place to another?

PREDICT

What will change on the target when the flashlight is turned on?

TRACE THE PATH

Fill in the model for your light investigation:

SOURCE	PATH	TARGET	OBSERVED CHANGE

We observe light reaching the target — then we INFER that energy transferred. We do not 'see energy.'

TEST

1. Shine the flashlight on the target. What changed?

2. (Barrier test) Put a barrier between the flashlight and the target. What happens to the light spot?

3. Remove the barrier. What returns?

DRAW

Draw the light path from the flashlight to the target. Add the barrier.

Draw here: flashlight → beam → target (with barrier)

EXPLAIN

What evidence shows that light transferred energy from the flashlight to the target?
