Interactive Science Notebook — Chapter 5 · Collisions Transfer Energy

Trim each insert on the dashed line and glue into your notebook. Every interactive part has a flat, low-motor alternative.

INSERT 1 — What Is a Collision? · trim on the dashed line · glue the BACK

What Is a Collision?

Chapter 5 · Week 6

VOCABULARY

collide = to come together with _____

collision = an instance of _____

sound = a form of energy that comes from a _____ object

WHAT A COLLISION CAN CHANGE

1. MOTION (speed or direction)
2. SHAPE
3. SOUND (we hear it)

DRAW

Draw one collision and label what changed (motion / shape / sound).

[draw your collision here]

INSERT 2 — The Collision Model + Fair Test · trim on the dashed line · glue the BACK

The Collision Model + Fair Test

Chapter 5 · Week 6

THE MODEL

COLLISION
→ MOTION CAN CHANGE
→ ENERGY CAN TRANSFER
→ ENERGY DOES NOT DISAPPEAR

FAIR TEST RULE

CHANGE ONE THING AT A TIME.

Part A (speed): same car, same target, same surface — change ONLY ramp height.

Part B (mass): same ramp, same target, same surface — change ONLY mass/weight.

MY PREDICTIONS

Part A — I predict the target moves farthest at ____ books, because _____

Part B — I predict the target moves farthest with ____ cars, because _____

INSERT 3 — Energy Does NOT Disappear (lift-the-flap) · trim on the dashed line · fold the flap DOWN and glue the BASE · flat option: write the answer under the flap

Energy Does NOT Disappear

Chapter 5 · Week 6 · lift the flap to check

THE QUESTION (on the flap)

When a car hits a cup and the cup moves, DID THE ENERGY DISAPPEAR?

THE ANSWER (under the flap)

NO — the energy did NOT disappear.

Some energy moved to the cup (it moved). Some became sound (we heard it). A tiny bit became heat (hard to measure).

MY EVIDENCE

In our Crash Lab, I observed: the target moved _____ cm when _____

The change I observed is evidence that energy _____.
