Types of Fossil Fuels

Chapter 2 Unit 2 Guided Notes · Grade 4 Using Natural Resources for Energy

Name: _____ **Date:** _____

BIG QUESTION **What are fossil fuels?**

KEY WORDS

coal — a _____ fossil fuel formed from plants in wet, swampy places.

petroleum (crude oil) — a _____ fossil fuel found under Earth's surface.

natural gas — a _____ fossil fuel, mostly methane, found underground.

THREE FOSSIL FUELS

Coal, petroleum, and natural gas all form from the remains of organisms that lived long ago.

FOSSIL FUEL	STATE OF MATTER
coal	_____
petroleum (crude oil)	_____
natural gas	_____

HOW THEY FORM

Buried remains + heat + pressure over millions of years.

Petroleum forms from _____ organisms buried on the ocean floor.

Coal forms from _____ buried in swamps that become peat, then coal.

CHECK YOUR THINKING

How are coal and petroleum alike? How are they different?

Formation and Uses

Chapter 2 · Page 2

Name: _____ **Date:** _____

BURIED + SQUEEZED

↓

PEAT

↓

COAL

WHAT WE USE THEM FOR

Match each fossil fuel to a use. Write a word or short phrase.

FOSSIL FUEL	A USE
coal	_____
petroleum	_____
natural gas	_____

CHECK YOUR THINKING

Why are these three fuels called FOSSIL fuels?

_____

CONNECT *Chapter 2 connection: all fossil fuels come from the remains of living things from long ago.*
