Grade 4 Science — ANSWER KEY

Unit 2 Assessment — Using Natural Resources for Energy

Teacher only. 25 questions × 2 points = 50 points.

Section 1: Vocabulary Matching — Answer Key (Questions 1–8 | 16 points)

1. Renewable Resource → F. A natural resource that can be restored or replenished as fast as or faster than it is used.

2. Nonrenewable Resource → A. A natural resource that cannot be restored as quickly as it is used by humans.

3. Fossil Fuel → E. An energy-dense fuel formed from the fossilized remains of ancient living organisms.

4. Petroleum → C. A liquid fossil fuel formed deep underground that is refined into gasoline and diesel.

5. Uranium → J. A mined resource used in nuclear power plants to produce heat.

6. Turbine → I. A machine with blades that spins when moving air, water, or steam pushes against it.

7. Generator → B. A machine that helps produce electricity when a turbine spins.

8. Solar Energy → H. Energy from sunlight that can be used to produce electricity.

Unused distractor D: Heat transferred from Earth's interior.

Unused distractor G: The energy of moving water flowing through rivers or ocean tides.

Section 2: Multiple Choice — Answer Key (Questions 9–25 | 34 points)

9. C. Renewable resources can be restored quickly, while nonrenewable resources take millions of years to form.

10. B. Coal

11. B. They are being used much faster than nature can create them.

12. A. Petroleum (Crude Oil)

13. A. Uranium produces heat that helps create steam

14. B. Electricity

15. A. The energy of moving water pushes a turbine connected to a generator.

16. D. Solar power

17. C. Solar energy depends on available sunlight, so less sunlight can limit electricity production.

18. D. Deep inside Earth

19. A. Electricity

20. B. Gasoline fuel and battery power

21. C. Nonrenewable resource

22. A. Releasing smoke and air pollutants into the air

23. B. A nonrenewable energy resource

24. C. They both use heat to turn water into steam that spins a turbine generator.

25. D. Wind power
