Chapter 1 Friday Flex

> Three tracks. **No Friday activity is required for Week 2's new core instruction.** Low-prep, quick reset.

RECOVER

Field	Value
Time	flexible
Materials	unfinished scavenger pages, notes
Teacher prep	none
Student independence	independent/guided
Printable	as needed
Reusable	yes
Concepts reinforced	energy causes change, evidence

Options: - Finish the Energy Detectives scavenger hunt (Tuesday's AP 1.1 page). - Absent-student recovery (see `student/recovery/01-ch1-absent-student-recovery.md`). - Notes correction — complete missing guided-notes sections with teacher support.

PRACTICE — Energy Charades

Field	Value
Time	15–20 min
Materials	scenario cards (teacher-printed)
Teacher prep	low — print/cut scenario cards
Student independence	guided
Printable	yes (cards)
Reusable	yes (laminate optional)

Field	Value
Concepts reinforced	forms of energy, change, evidence

Teacher rules: 1. A student draws (or is given) an energy/change scenario card (e.g., "flipping a light switch," "ringing a bell," "pushing a toy car," "warming hands near a heater"). 2. The student acts it out or describes it safely (no running, no touching). 3. Peers identify **two things:** (1) the energy form, (2) the observable change. 4. Discuss: "What was the cause? What was the effect?"

PRACTICE / EXTEND — Energy Evidence Sort

Field	Value
Time	15–20 min
Materials	sort cards (scenarios + form labels)
Teacher prep	low — print/cut
Student independence	guided→independent
Printable	yes
Reusable	yes
Concepts reinforced	evidence of energy, forms of energy

Activity: Students sort scenario cards ("ball rolling," "bulb glowing," "ice melting," "bell ringing," "battery in a toy") under form headings (motion, sound, light, heat, electrical energy) and identify the observable change for each.

EXTEND — Energy Mystery Files

Field	Value
Time	15 min
Materials	clue strips
Teacher prep	low
Student independence	guided
Printable	yes

Field	Value
Reusable	yes
Concepts reinforced	evidence → energy inference

Activity: Give a short mystery ("The room got brighter. The fan started spinning. What energy is at work?"). Students use the ENERGY → CHANGE → EVIDENCE model to solve and explain.

Alt EXTEND — "What Changed?" challenge: students find one change at home/around school and bring the evidence description next week (non-graded, optional).

Rule check

- [x] Not required for Week 2's new core instruction
- [x] Low-prep, quick reset
