Using Natural Resources for Energy

Unit 2 Study & Review · Using Natural Resources for Energy · Student

Name: _____ **HR:** 4A 4B 4C 4D

Use this sheet to get ready for the Unit 2 assessment. Take your time — this is for YOU.

A · MATCH THE WORD

Draw a line from each word to its meaning.

WORD	MEANING (DRAW A LINE)
1. renewable resource	_____
2. nonrenewable resource	_____
3. fossil fuel	_____
4. turbine	_____
5. generator	_____
6. solar cell	_____
7. geothermal energy	_____
8. hydroelectric power	_____

Meanings:

A. heat that is transferred from inside Earth

B. electricity made from moving water, usually through a dam

C. a machine with blades that spins when steam, wind, or water pushes it

D. a resource that cannot be restored as quickly as it is used

E. a device that converts sunlight to electricity

F. a machine that makes electricity when a turbine spins it

G. a fuel formed from the remains of organisms that lived long ago

H. a resource that can be restored as quickly as it is used

B · RENEWABLE OR NONRENEWABLE?

Write R for renewable or N for nonrenewable.

RESOURCE	R OR N	RESOURCE	R OR N
coal		wind	
petroleum		natural gas	
sunlight		uranium	
flowing water		geothermal heat	

C · FILL THE PATHWAY

Write the missing steps so the electricity pathway is in order.

Word bank: burn the fuel · turn a generator · spin a turbine · heat water into steam · electricity

burn the fuel → [ ] → [ ] → [ ] → **electricity**

Now write TWO shorter pathways.

Wind: moving air → _____ → generator → electricity

Solar: sunlight → _____ → electricity

D · COMPARE

Fill in the blank to finish each idea.

A renewable resource is restored _____ .

A nonrenewable resource is NOT restored _____ .

A resource can be abundant (plentiful) but still _____ .

The three fossil fuels are coal, petroleum, and _____.

Nuclear power uses _____ as its fuel; its pathway is the SAME as coal.

A hybrid vehicle uses _____ different sources of fuel.

E · LABEL IT

Use the word bank to label the diagram.

Word bank: turbine generator steam (or water) electricity

F · SCENARIO

A town has strong, steady wind most of the year. It has no large river nearby and many cloudy days.

1. Which resource is most reasonable for this town to investigate? _____
2. Write ONE fact that supports your choice.

_____

3. Write ONE limitation they would still need to consider.

_____

G · SHORT RESPONSE

Pick ONE energy resource you studied. Write one benefit and one limitation, and where it works well.

Resource: _____

Benefit:

_____

Limitation:

_____

Works well when / where:

_____
