Practice — Energy Causes Change

Chapter 1 · Grade 4

Name: _____ Date: _____

A. What changed?

For each one, write the observable change and a possible energy form.

Scenario	Observable change	Possible energy form
A light switch is flipped.		
A toy car is pushed.		
A bell is rung.		
An ice cube sits on a warm hand.		
A flashlight is turned on.		

B. Evidence or not enough evidence?

Circle whether each is evidence that energy caused a change.

Observation	Circle one
The fan blades started spinning when we plugged it in.	Evidence / Not enough
The battery looks shiny.	Evidence / Not enough
The room got brighter when the light came on.	Evidence / Not enough
I think the motor is strong.	Evidence / Not enough

C. Stored energy

Does it have stored energy? When does it cause a change?

Example	Stored energy? (yes/no)	When does it cause a change?
a battery in a drawer		

an apple held above the ground		
a stretched rubber band		
a book lying flat on a table		

D. Explain

Energy is the ability to cause change. Describe one change you have observed and tell what energy you think caused it.
