Heat Transfer — Investigation

Chapter 4 · Energy Transfer · Week 5 (Day 1)

Name: _____ Date: _____

BIG QUESTION

What evidence shows that energy transferred between warmer and cooler materials?

PREDICT

What do you think will happen to the temperature of the warm water? Of the cooler object?

SAFETY

Water is warm (not hot), controlled by the teacher. No hot plates. Handle the thermometer carefully.

MEASURE

Record the temperature in °C. Repeat the reading if you can.

Material	Temperature at start (°C)	Temperature later (°C)
Warm water		
Cooler object/container		
Reading 2 (optional)		

Warm water = about 40 °C or less. Cooler object = room temperature or cooler.

OBSERVE

Which material got cooler? Which material got warmer?

EXPLAIN

How is the temperature change evidence that heat transferred energy?
