Energy Detectives Optional Look Fors

OPTIONAL FLEX | Ungraded | Adapted from Teacher Guide AP 1.1

Use

Use after the Friday check, on a review day, or during a later FLEX block. Students may work individually or in pairs. No points are assigned.

Look Fors

- Each row names a specific classroom object or system.
- BEFORE and AFTER describe observable states.
- What changed identifies a difference, such as dark to light, still to moving, or quiet to noisy.
- The energy form is one of motion, sound, light, heat, or electrical energy.
- Students say they saw the change, not that they saw energy.

Possible Examples

Object	Before	After	Change / evidence
Classroom light	dark	bright	the room became brighter
Pencil sharpener	dull pencil; quiet	sharp pencil; sound	shape and sound changed
Rubber band	stretched	released	shape and motion changed
Bell	quiet	ringing	sound began
Flashlight	off	on	light appeared

Redirect: If a student writes verified proof or says energy itself was visible, ask: What specific change did you observe? Restate the conclusion using evidence.
